COMPANY DESCRIPTION

- **ATI formed in 1994**
- **Oil and Gas Advanced Instrumentation**
 - **Deepwater oil & gas**
 - **Pipeline monitoring**
 - **Liquefied Natural Gas**
- **Privately owned, at Houston Ellington Field**
- **Engineering capabilities include:**
 - **System integration**
 - **Real-time embedded systems**
 - **Experimental stress analysis**
 - **Fiber optic sensor technology**
 - **Conventional sensor integration**
 - **Environmentally hardened systems**
 - **Software development**

Brigham Young University

- Campus located in Provo, UT
- Enrolled Students: 32,980
- 14th Largest US Chemical Engineering Department

Astro Technology Background

- **ATI provides engineering solutions:**
 - **Monitoring of offshore flowlines, SCRs, drilling risers, umbilicals and cables**
 - **Detection of pig and blockage location in pipelines**
 - **Smart fields monitoring of pipelines and subsea fields**
 - **Cable and umbilical splicing and repair**
 - **LNG monitoring**
 - **Instrumenting structures**
 - **Testing solid rocket motors**
 - **Robotics applications (“Robonaut” hand)**
 - **Aerospace vehicles**
 - **Demilitarization of weapons of mass destruction in Russia**

Offshore Projects

- Bass Lite
- Devils Tower
- Geauxpher
- Troika
- Pluto
- BP Ocean Clipper / Ocean Confidence
- Mardi Gras
- Holstein
- Thunder Horse
- Brass LNG – Engineering phase

OVERVIEW OF INSTRUMENTATION METHODS

TRIDENT SUBSEA MONITORING SYSTEMS

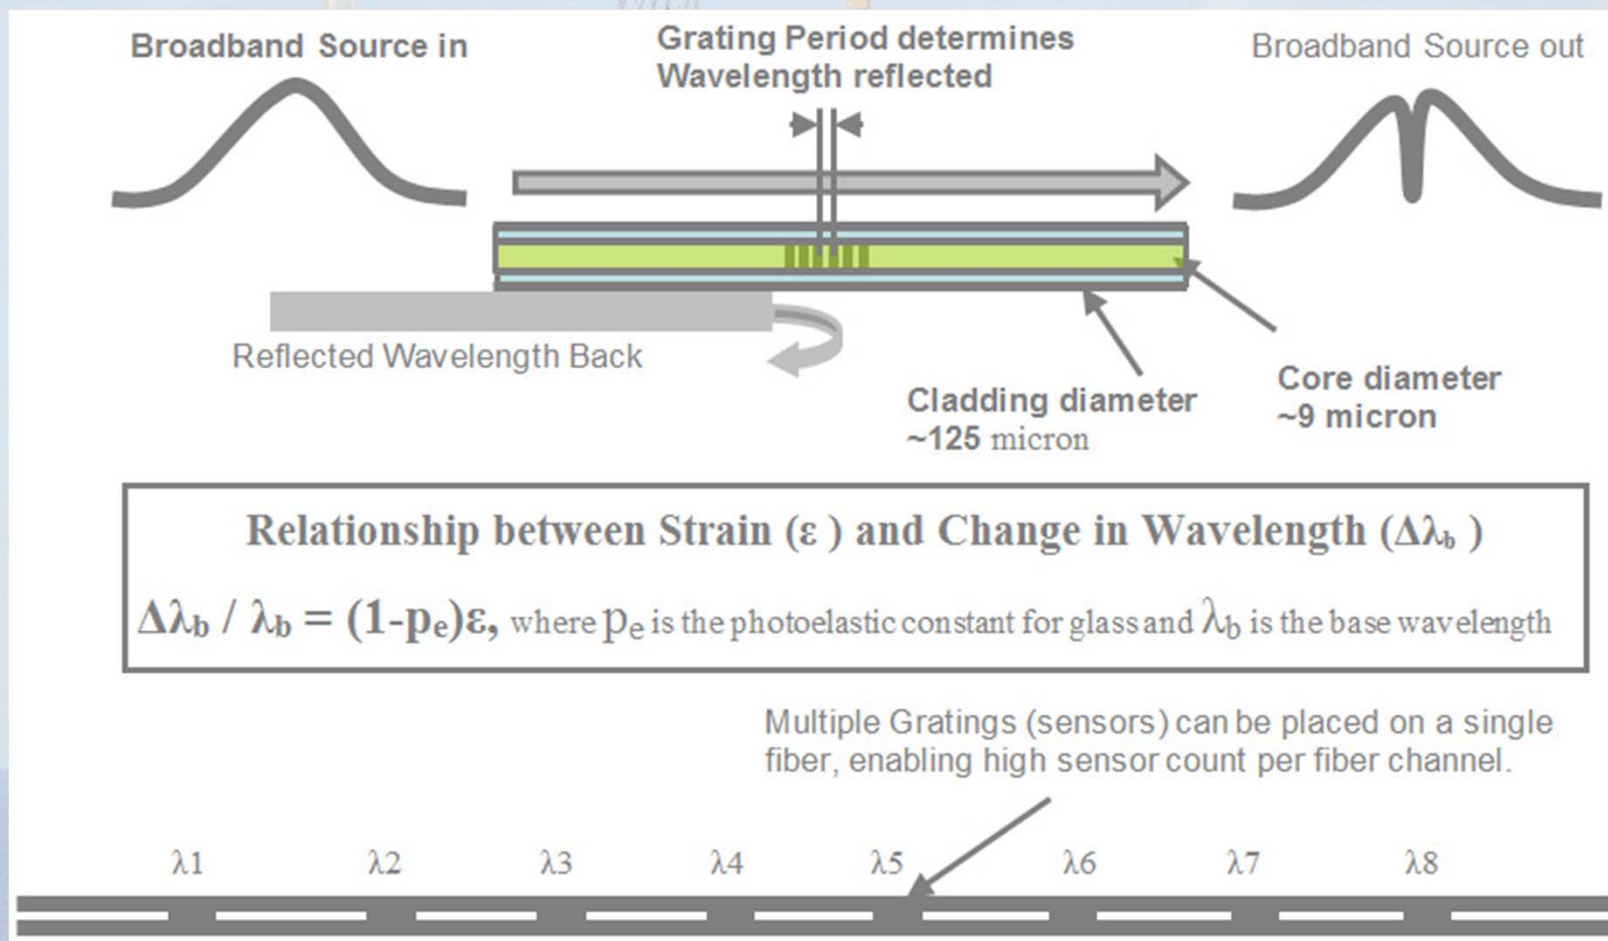

Bass-Lite Monitor System

- Deepest monitoring system – 6750 ft
- Longest monitoring system – 57 miles

Fiber Optic Monitoring

Monitor Peak Shifts

Multiple Gratings (sensors) can be placed on a single fiber, enabling high sensor count per fiber channel.

Monitoring System

- Sensor Station Installation

Monitoring System

- Sensor Station Installation

Monitoring System

- Offshore Fiber and Electrical Hookup

Monitoring System

- Offshore Cable Installation

Monitoring System

- Offshore Installation

Monitoring System

- Offshore Cable Installation

Monitoring System

- Deepwater Installation

A large rectangular inset image shows an underwater view of a subsea system installation. The system is a dark, cylindrical object with a yellow top and bottom section, and a red cable is attached to it. The background is a murky greenish-brown water. Overlaid on this image is white text providing technical data.

Deepwater Monitoring Software

Connect to live systems
Web accessible configuration and results

Monitoring from Remote Locations

- Remote display of real-time data
- Secure & encrypted data transmission
- Getting the right data to the right people to make the right decisions
- Advanced Process Monitoring:
 - <http://apmonitor.com>

Software – Process Monitoring

- Fully utilize existing measurements
 - Hundreds of isolated measurements
 - Advanced Monitoring places data in context (as opposed to raw data)
 - Holistic view of available measurements
- Provides Smart Notifications
 - Early leak detection
 - Identify leak location
 - Reduction of unplanned shutdowns due to false alarms
 - Abnormal situation management

Software Benefits

Trident Subsea Systems

- Meet regulatory reporting requirements
- Flow assurance of oil and gas transport pipelines
- Structural characterization
- Visualize data from remote locations
- Reduce alarms by consolidating relevant information
- Improved design and operations
- Improved safety and environmental criteria

Subsea field real time monitoring

- MEG Chemical Injection
 - Control hydrate formation
 - Injection at wellheads and local intervention
- Active Heating
 - Control & mitigation of hydrates
- Pressure / Flow Control
 - Control at wellheads and manifolds
- Mechanical Intervention

CLEAR GULF JIP

- Reduce risk of hydrocarbon spillage
- Improve safety
- Significant cost avoidance and downtime
- Assists in regulatory compliance
- Improved subsea field design
- Low investment cost for JIP participants
- Utilize NASA facilities and expertise
 - US flagship technology organization
- Credible third party involvement
